EDUCATION

Clemson University

Bachelor of Science, Computer Science

Clemson, SC

Anticipated December 2027

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Discrete Structures, Programming with C++, Software Development Foundations, Foundation App Development, Linear Algebra

PROFESSIONAL EXPERIENCE

SYNK

Software Engineering Intern

Remote

May 2026 – Present

- Developing features for an AI-powered virtual-event platform in a production Next.js, React, TypeScript, and Node.js codebase
- Building real-time communication and interaction features with WebRTC and WebSockets, and immersive 3D event environments with Three.js and React Three Fiber
- Working across PostgreSQL and Redis data layers; ship containerized services with Docker on AWS

Capital One

Business Analyst Intern

McLean, VA

June 2025 – August 2025

- Built and optimized SQL pipelines processing large-scale Contractor and Commercial card transaction datasets, uncovering that only 34% of full construction projects were sourced through a single vendor
- Delivered 4 data-driven recommendations projected to increase full-project purchases by 45%; presented findings to partnership and analytics teams, informing strategic initiatives worth \$1.2B in potential revenue

NASA EPSCoR

Student Researcher

Columbia, SC

November 2023 – November 2024

- Built ML-based predictive models that reduced defect prediction error by 10%, enabling more accurate automated fiber placement for composite manufacturing
- Analyzed thermoset and thermoplastic material data to optimize processing parameters for improved strength and stiffness; presented at the USC NASA EPSCoR Conference and Clemson Composites Center grant meeting

PROJECTS

Foresite | Next.js · TypeScript · Claude API · Tailwind CSS · Vercel

- Engineered an AI-powered academic risk engine with real-time semester analysis — custom 0–100 scoring model detects deadline collisions and burnout patterns across 5+ courses per upload
- Built the full stack with Next.js and the Claude API; shipped to production on Vercel with sub-second risk recalculation on course mutations

Focus Fee — 2× First-Place Hackathon Winner | TypeScript · React · Electron · Node.js · Solana Web3.js

- Built a gamified focus-enforcement desktop app that monitors active windows in real time and charges per-minute fees for visiting blacklisted distraction apps
- Integrated Solana Web3.js to settle accrued fees as on-chain SOL transfers via a serverless Vercel backend, with live USD→SOL conversion from the CoinGecko API

LEADERSHIP & PROFESSIONAL DEVELOPMENT

Clemson Forge — Software Engineering Fellow, Clemson University

January 2026 – May 2026

- Mentorship-driven fellowship bridging CS coursework and real-world engineering — developed a personal software project with mentor guidance and career-readiness support

AWS Student Builder — Campus Leader, Clemson University

April 2026 – Present

- Represent AWS as a paid Builder Center ambassador — hosting campus events and tabling activations, delivering cloud presentations and demos to student organizations, and publishing technical articles to drive peer adoption

ColorStack Fellow

- Participated in career development, technical workshops, and mentorship through the national community of Black and Latinx CS students

SEO EDGE Participant, SEO Career

July 2024 – Present

- Participated in 80+ hours of technical training, interview preparation, and 1:1 career coaching

Transfer Council — Philanthropy Committee, Clemson University

Januray 2025 – Present

- Supported fundraising initiatives raising thousands for Alzheimer’s research while advocating for transfer student needs

SKILLS

Languages: Java, C++, Python, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Tools: React, Next.js, Node.js, Electron, Three.js, React Three Fiber, WebRTC, WebSockets, Tailwind CSS, PostgreSQL, Redis, Docker, AWS, Vercel
